Introduction

What is Blahstogo?

- AI-driven game promotion project
- Created to explore digital sales & AI content creation

Goal of the Course:

- Learn digital sales strategies using AI tools
- Generate creative prompts with ChatGPT & MidJourney
- Use social media to increase engagement and visibility

Key Tools Used:

- ChatGPT: For generating creative ideas
- MidJourney: Premium AI for image generation
- Canva: Template design for consistent visuals
- CapCut: Trending reels creation
- LinkTree: Consolidated social media presence

Project timeline

Creation

Use of different tools for the content creation process

- ChatGPT
- MidJourney
- Canva

Promotion

Organisation and planning of our promotion phase

- Social networks
- Trello
- Creation

Results

We obtained results in the analytics and insights sections of our different social network account

Analysis

Analysis of these insights to see which strategies work and which do not

Creation process

1.

- Generating dad jokes, lawyer jokes and student bloopers
- Sorting easily the president and tech punchlines

2.

Midjourney

- Creating images to illustrate our cards
- Using different prompt to generate different images of people from different ethnic groups

3.

Canva

- Adding our images and jokes on each cards
- Creating a consistency in the size, font used and positioning

Promotion phase

Trello was used to plan and schedule what we were planning to do from social networks and follow our insight.

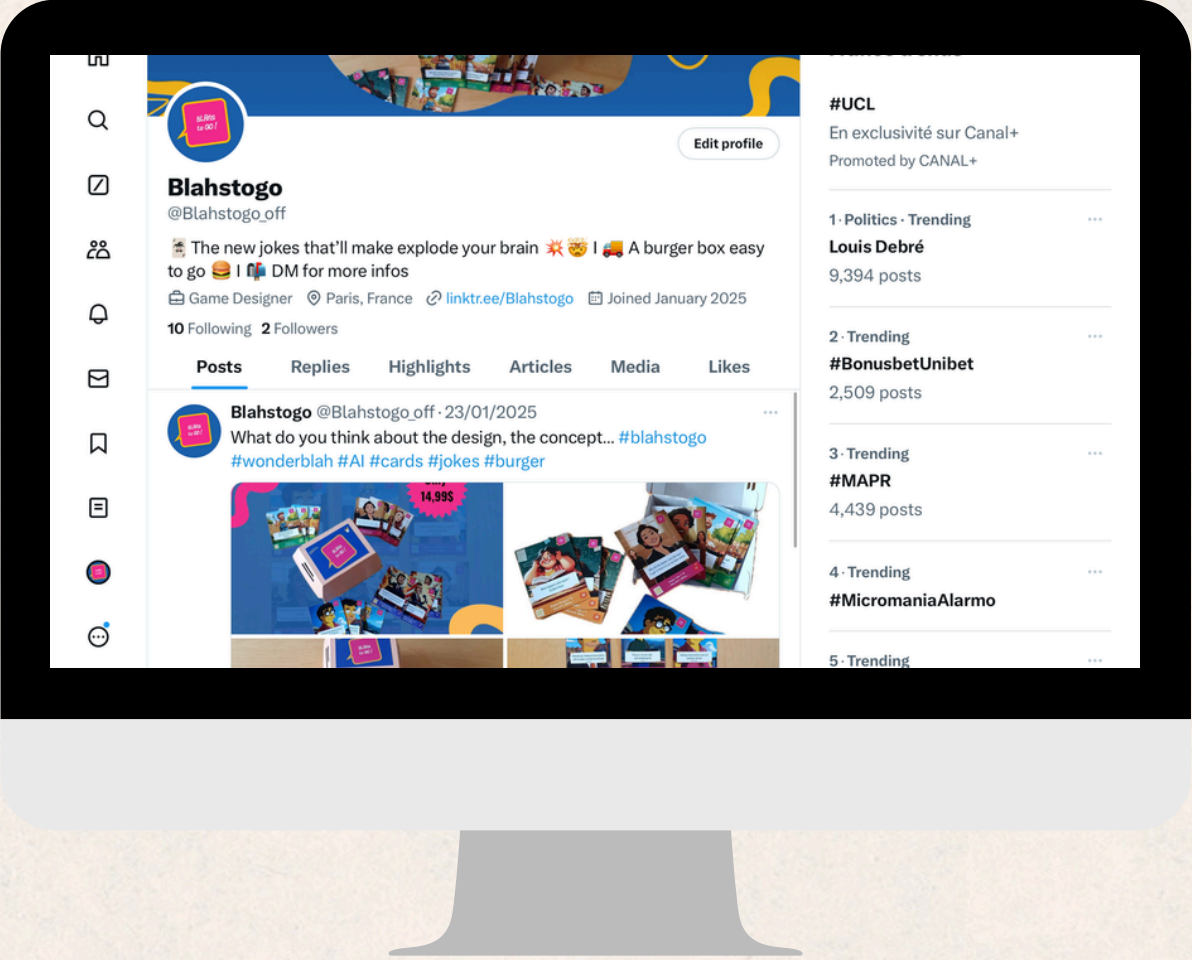

We chose to use Canva and CapCut to create original content for our social networks

Then we chose different strategies and social networks to target an audience and establish presence

Example of our posts

Social networks

- First, we created an Instagram account and then linked it to our facebook page
- We posted photos, stories and reels

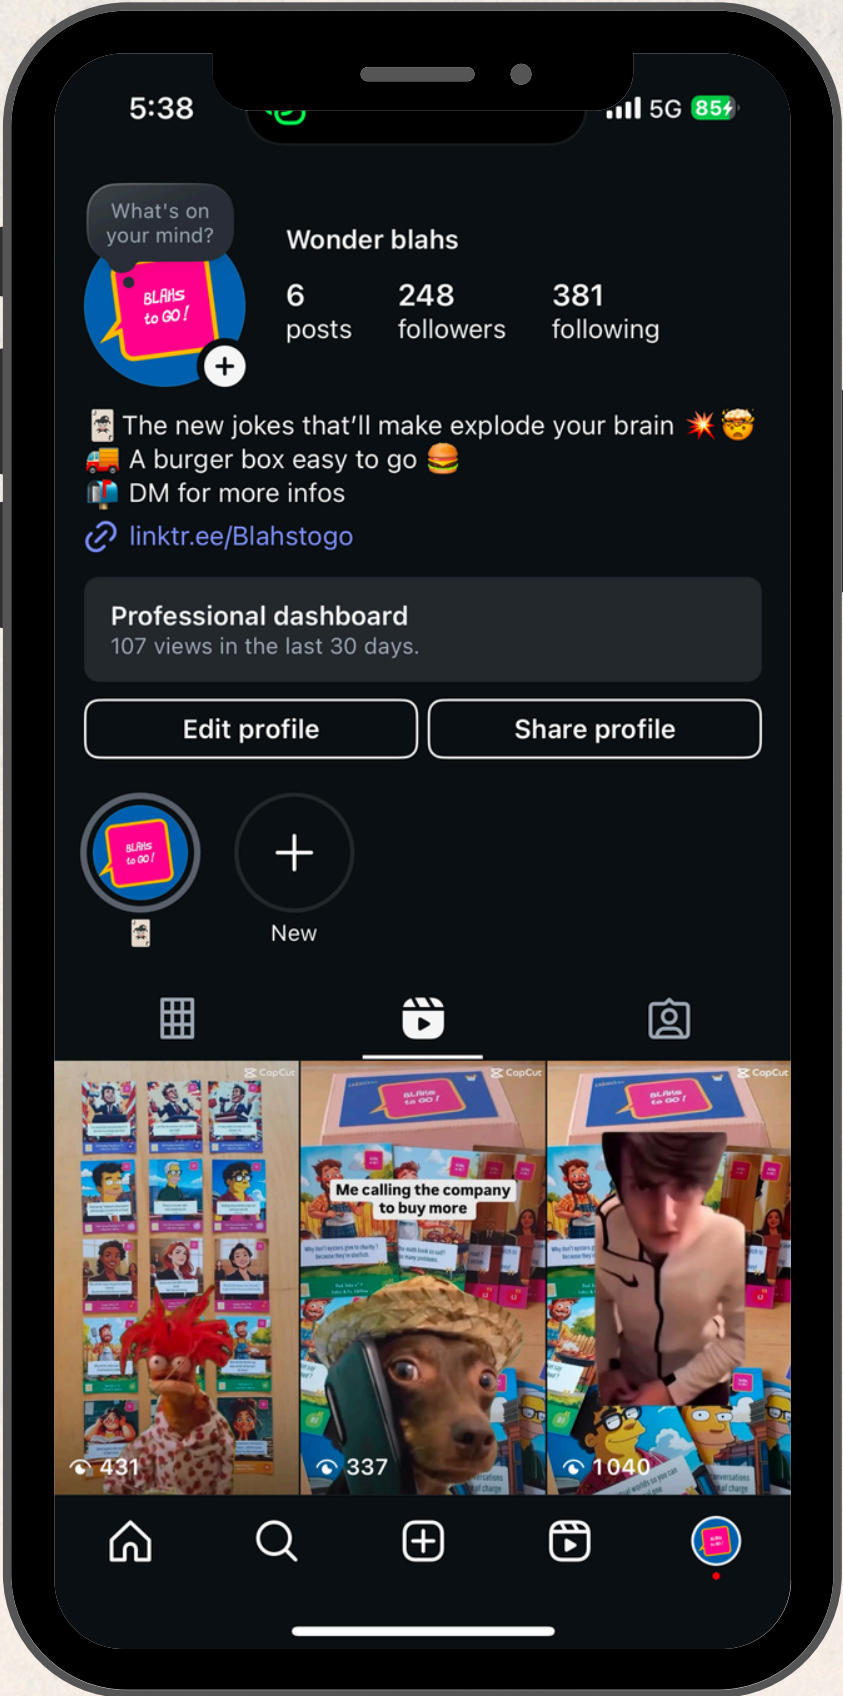

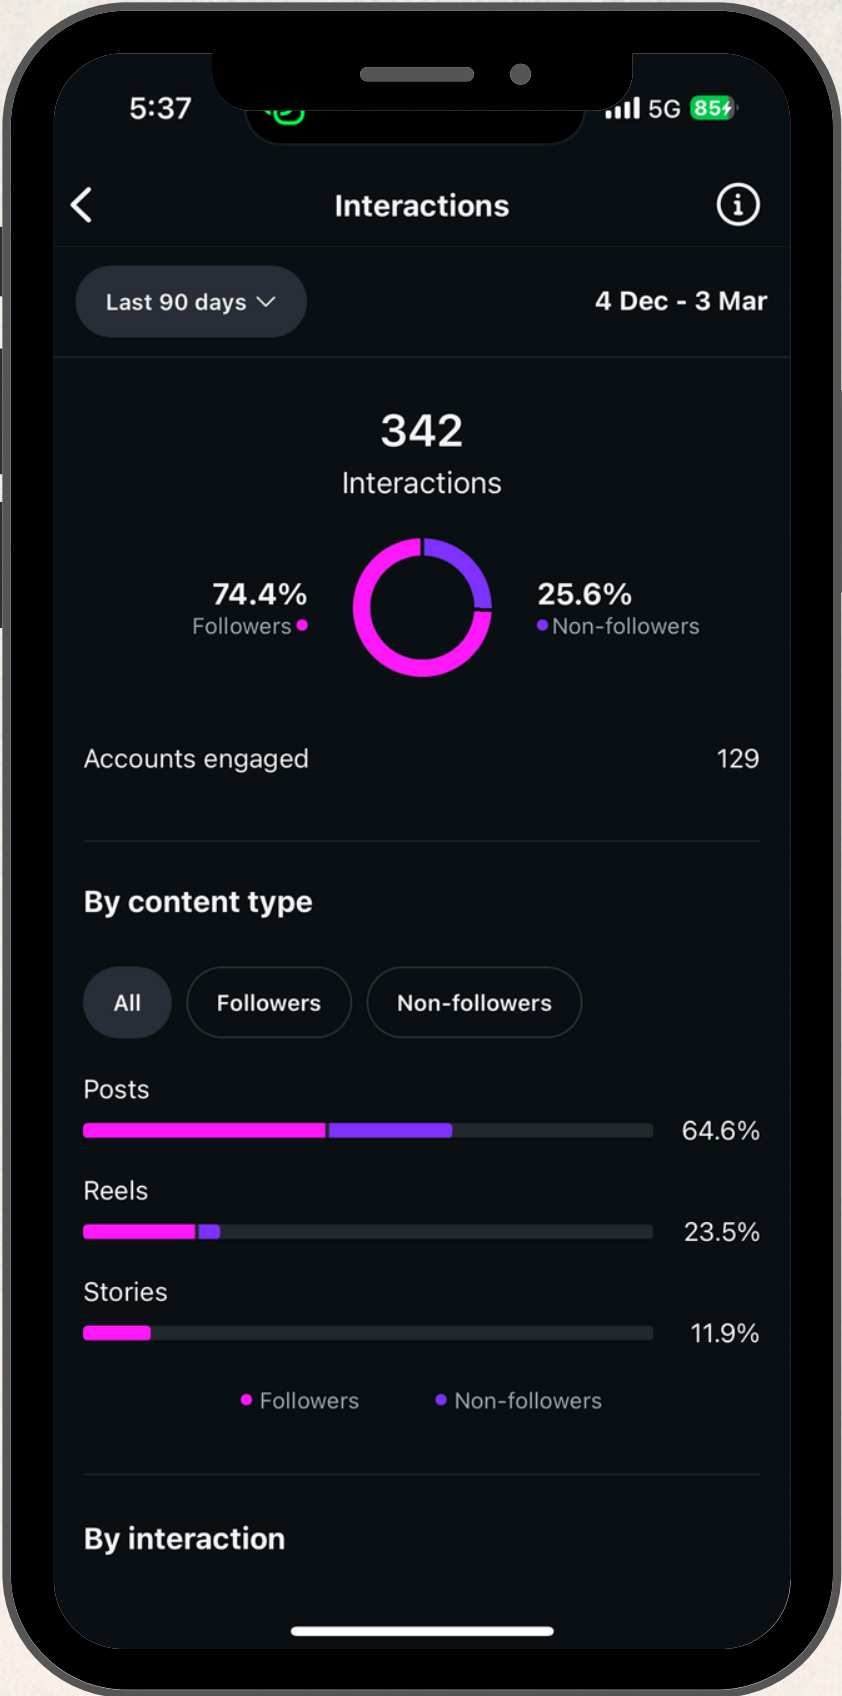

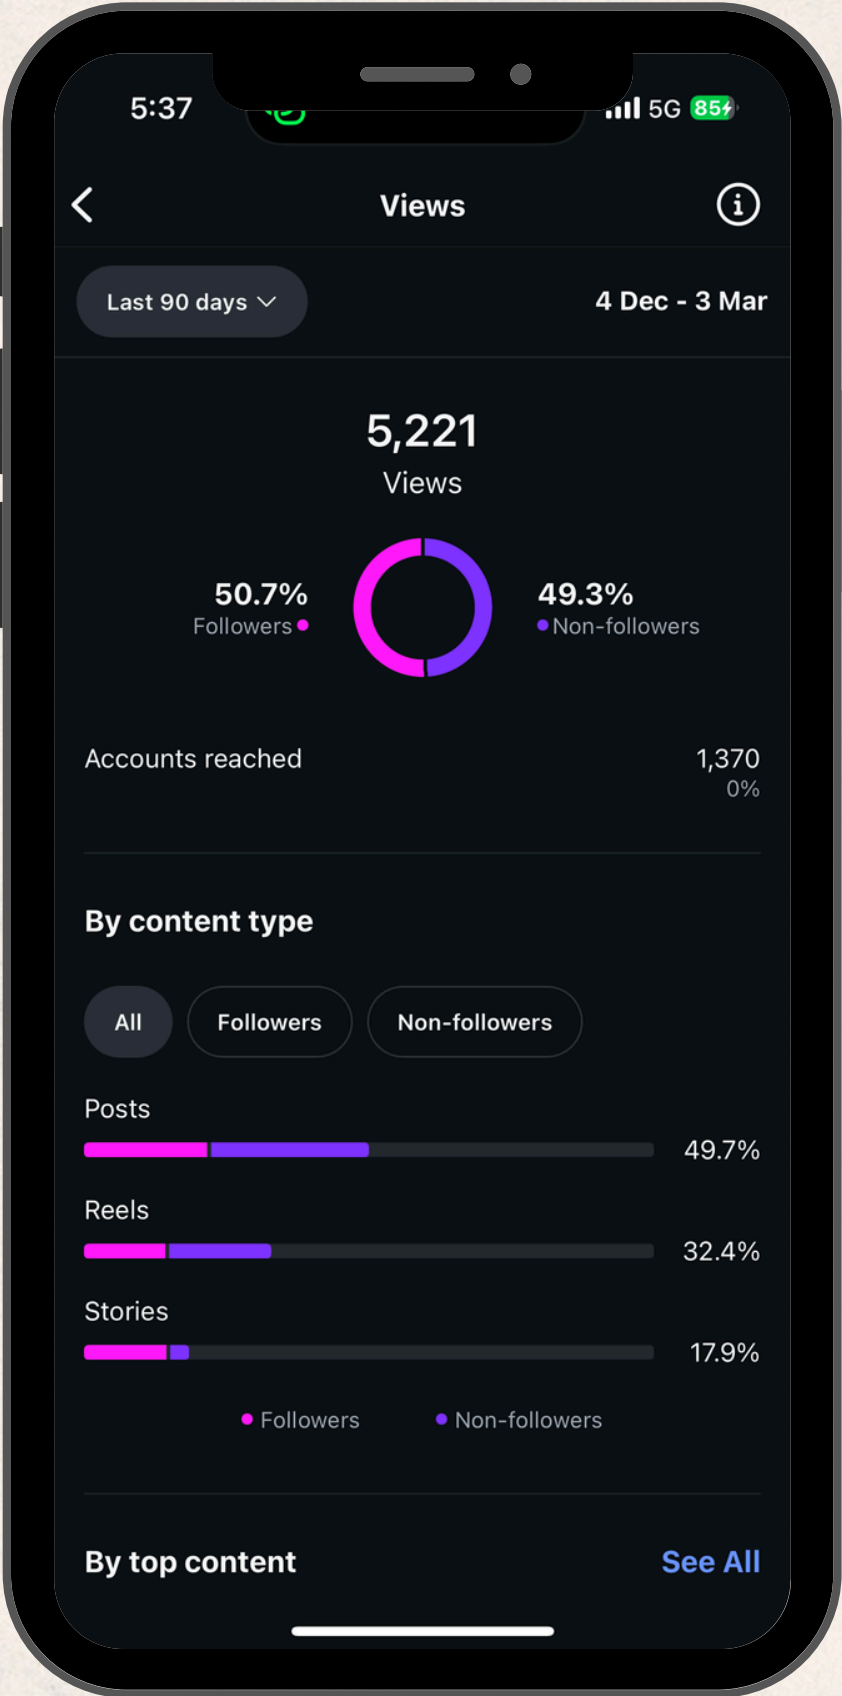

- Thanks to CapCut we created short videos using trending memes and posted them on Instagram and TikTok
- Combined with good hashtags those videos attracted audience

- We also chose to use Reddit and X to join communities and have their opinions or to promote it in board games communities

Linktree*

- To gather all our social networks we decided to creat a Linktree
- Easy to create and add it in our biography
- We complete it with external links like the Liblahry.

Analysis & insights

Our way of working

- Mixing our different aptitude about social networks
- Maintaining a certain consistency to unify our visuals

Strategic growth :

- Following accounts that may be interested in our account
- Share on our personal networks
- Related or viral hashtags and viral memes and trends to gain visibility

Failure :

- Joining communities was harder than expected
- Making views on TikTok and X was not our best

Lesson learned :

- Cannot control the algorithm which limit us in gaining visibility
- People don't seems to like AI generated content but they are also constantly consuming it

KeyTakeaways

The power of content, community, and AI

- AI tools are more than just "futuristic"
- Social media isn't just about memes (but we love them anyway)
- The power of consistency & community
- Failure = growth (and funny stories)

This project taught us that digital sales and marketing aren't just about products—they're about creating a connection. We realized that content can bring people together, spark conversations, and even make people smile. That's the real power of digital marketing.

Thank you!
